

DEFENDER™ CELL SAFETY BARRIER

If it moves...guard it. Injuries are expensive and can be avoided. Increase your safety ROI with point of operation and perimeter guarding with the **Defender Cell Safety Barrier** from Rite-Hite Machine Guarding.

The Defender Cell is an automated barrier door that is designed to restrict access to dangerous robot/machine movement while containing the process and offering greater protection for the machine operator.

Enhance safety in manual and automated machine applications.

Watch the video to find out how!

Reduce Potential Injuries from

- Impact from rotating or moving parts
- Drawing in hazards
- Flying debris
- Unexpected automated machine movement

Point of Operation and Perimeter Guarding provides

- Improved safety
- Enhanced protection
- Increased productivity

APPLICATION PHOTO OF THE MONTH

The Challenge: A way to section off the loading dock from the rest of the facility in order to maintain a certain level of humidity and temperature to ensure the successful ripening of tomatoes.

The Solution: FasTrax High Speed Door - [Click here](#) for more information.
