

Flex Neck LED Dock Light illuminating the inside of a docked trailer at Coldstore Urk

Coldstore Urk (NL) Case Study

Rite-Hite's Flex Neck LED Dock Lights enhance productivity, safety and energy efficiency at Coldstore Urk's loading docks.

"A very good illumination of the inside of a trailer or container at the loading dock is very important for us. Everything that can't be seen can become a safety hazard for our staff," says Willem Brands, CEO of Coldstore Urk.

With a multi-articulating arm built from molded nylon links, the Rite-Hite Flex Neck LED Dock Light is designed to make it easier to see inside all corners of a docked trailer or container.

The links of the multi-articulating arm offer multiple bend points for increased flexibility at the loading dock. The bend points can be easily modified in the field to address unique needs, or obstructions that may be encountered at a dock opening. In addition, the links can be tightened, if necessary, to eliminate the sagging that often occurs with traditional metal snake arms.

The Flex Neck has four different light levels and uses visual indicators to identify the current level of lighting. It uses 18 watt CREE LEDs that produce 930 lumens with an estimated 175,200 hours of service life. Options include motion-sensing technology which allows the lights to dim to 25 percent of the output after a forklift or a person has left the trailer. After 30 minutes of inactivity the light dims automatically to the lowest setting (4W energy consumption) The unit is designed with a low-profile, no-glass head to reduce the chances of impact and damage.

Company Profile

Coldstore Urk is a flourishing company with multiple cold storage warehouses in three locations. Their core business is cold storage of fish and fish related products. Coldstore Urk is situated in Urk, the Netherlands, right in the heart of the Dutch fishing industry. Together with their partners, they are an important link in the distribution chain of fish throughout the whole of Europe.

Coldstore's spearheads are: Service, Quality and Reliability. Their cold storage facilities are built with the highest quality standards in mind to maintain the quality level of product at its maximum. Hygiene is naturally considered to be of paramount importance in their deepfreeze facilities and they have EU accreditation.

A proud member of AGRO Merchants Group:

AGRO Merchants Group provides innovative cold chain solutions on a global basis by partnering with the highest quality family businesses and creating new, reliable, and integrated trade networks to help its customers grow. The company is investing in modern assets, industry leading technologies, and value-added service offerings to ensure the highest quality supply chain management standards in the industry.
